

Professional Summary

Computer Science and Business Systems student with hands-on experience across Java full-stack development, LLM/AI application development, and automated software testing. Built and evaluated production-style systems including a Spring Boot and React skill-exchange platform, an asynchronous LLM regression-detection pipeline in Python, and automated Selenium/Java test suites during a Quality Engineering internship at Capgemini. Proficient in Java, Python, SQL, REST API design, and CI/CD automation, with growing expertise in LLM evaluation, prompt engineering, and Retrieval-Augmented Generation (RAG). Strong focus on software quality, test automation, and building reliable, well-tested systems

Skills

Programming Languages: Java, Python, SQL | **AI/LLM:** LLMs, Prompt Engineering, RAG, Embeddings, Semantic Search, LLM Evaluation | **RAG & AI Frameworks:** LangChain, LlamaIndex, RAGAS, DeepEval | **Backend:** FastAPI, REST APIs, Pydantic, Async Python | **Document Intelligence:** PDF/DOCX Processing, OCR, Document Ingestion | **Cloud & DevOps:** Azure, Docker, GitHub Actions | **Tools:** Git, GitHub, Postman

Professional Experience

V&V Automation Testing Intern, Capgemini

01/2026 – 05/2026
Chennai, Tamilnadu

- Automated **80+** test cases using Selenium WebDriver with **Java**.
- Created and executed BDD test scenarios using Cucumber and TestNG to validate application functionality.
- Conducted functional and regression testing across key modules of a travel booking platform to ensure software reliability.
- Configured Jenkins pipelines to automate test execution as part of the **CI/CD** workflow.
- Collaborated with the team using **Git/GitHub** for version control, code integration, and change tracking.

Projects

Model Regression Detection System, Python, Groq API (OpenAI-compatible), Pydantic, SQLite, asyncio, pytest

- Architected** a provider-agnostic LLM evaluation pipeline to detect quality regressions in an email classifier whenever prompts or models changed, supporting Groq, OpenAI, and local Ollama models through a single configuration value.
- Developed** a version-controlled prompt management system using YAML configurations validated with Pydantic, along with an 80-case golden dataset sourced from real e-commerce support tickets and live GitHub bug reports, including real-world typos and colloquial edge cases.
- Implemented** an asynchronous evaluation engine that batches golden-dataset cases, measures category accuracy and LLM-judged summary quality, and compares results against previous runs to identify case-level regressions and improvements.
- Built** configurable regression thresholding to classify evaluation runs as warning or critical based on pass-rate drops, with automatic retry and exponential backoff for API rate limits and transient connection failures.
- Generated** self-contained HTML regression reports with scorecards, pass/fail diffs, and per-category performance deltas for clear analysis of model and prompt changes.
- Developed** 30+ unit tests covering core evaluation logic, regression diffing, threshold classification, result storage, and retry behavior without requiring live API calls.

SkillSwap – Skill Exchange Platform, React, Spring Boot, Java, MySQL, REST API, Swagger, Postman

- Engineered** a full-stack skill exchange platform enabling users to create profiles, showcase skills, and connect with other learners for collaborative knowledge sharing.
- Implemented** RESTful APIs using Spring Boot and integrated them with a responsive React frontend to deliver seamless user interactions.
- Modeled** relational database schemas in MySQL for users, skills, and exchange requests while implementing CRUD operations.
- Validated** and documented REST APIs using Swagger and Postman to improve backend reliability and simplify integration.
- Maintained** a modular architecture and leveraged Git-based version control to support scalable development and collaborative workflows.

Review Insight Chrome Extension, JavaScript, Chrome Extension API, HTML, CSS

- Developed a Chrome extension that analyzes customer reviews on e-commerce platforms including Amazon, Meesho, Myntra, and Ajio to provide an instant product verdict.
- Extracted review data directly from web pages using the Chrome Extension API and DOM manipulation for real-time analysis.
- Processed review ratings and textual feedback using rule-based sentiment analysis to categorize products as **Recommended**, **Consider**, or **Not Recommended**.
- Designed a lightweight browser interface that enables users to evaluate product reviews without navigating away from the shopping page.
- Improved shopping efficiency by summarizing overall customer feedback into a quick, easy-to-understand recommendation.

Leadership & Activities

- Led and hosted a **36-hour national-level hackathon**, managing end-to-end coordination including logistics, scheduling, and participant support
- Organized a **TEDx college event**, coordinating speakers, teams, and event execution to ensure smooth delivery
- Actively contributed to organizing and managing a **technical paper conference**, handling event planning and coordination

Education

Panimalar Engineering College, B.Tech - CSBS
CGPA: 8.50

10/2022 – 05/2026
Chennai, Tamilnadu

Velammal Vidyalaya, 12th - CBSE
Percentage: 82.4%

2019 – 2020
Paruthipattu, Chennai
