Professional Summary

Computer Science and Business Systems graduate with hands-on experience in Python, LLM applications, and software testing. Currently building practical knowledge in Retrieval-Augmented Generation (RAG), embeddings, semantic search, prompt engineering, and LLM evaluation through hands-on projects. Hands-on experience developing Python-based automation and evaluation workflows, with a strong interest in building AI-powered document and knowledge retrieval systems. Quick learner with a strong willingness to work with new AI technologies and backend frameworks.

Skills

Programming & Querying: Java, Python, SQL | **Data Analytics:** Pandas, NumPy, Excel, Exploratory Data Analysis (EDA), Data Cleaning, Statistical Analysis, Data Visualization | **Machine Learning:** Scikit-learn, Regression, Classification, Feature Engineering, Model Evaluation, Recommendation Systems | **AI / NLP:** LLMs, Prompt Engineering, RAG, Embeddings, Semantic Search, LLM Evaluation | **Business Intelligence:** Power BI, Tableau | **Tools & Frameworks:** LangChain, Streamlit, FastAPI, Git, GitHub, Postman, Jupyter, VS Code | **Databases:** MySQL, Qdrant (*Learning*)

Professional Experience

V&V Automation Testing Intern, Capgemini

01/2026 – 05/2026
Chennai, Tamilnadu

- Automated **75+** test cases using Selenium WebDriver with **Java**.
- Created and executed BDD test scenarios using Cucumber and TestNG to validate application functionality.
- Conducted functional and regression testing across key modules of a travel booking platform to ensure software reliability.
- Configured Jenkins pipelines to automate test execution as part of the **CI/CD** workflow.
- Collaborated with the team using **Git/GitHub** for version control, code integration, and change tracking.

Projects

Model Regression Detection System, Python, Groq API, SQLite, Pytest, GitHub Actions

- Built a **CI/CD-style LLM evaluation pipeline** that automatically re-tests an email classification feature against an **80-case golden dataset** when prompt or model configuration changes.
- Developed an **async evaluation engine** that concurrently processes test cases, evaluates category accuracy and summary quality, and uses an **LLM-as-a-judge** to score generated summaries against reference answers.
- Implemented **run-over-run regression detection** using SQLite to identify individual test cases that changed from pass → fail or fail → pass, with configurable thresholds for warning and critical regressions.
- Built **automatic retry with exponential backoff** for rate-limit, connection, and timeout failures, while optimizing concurrency and separating judge-model calls to handle real-world API constraints.
- Created **Pydantic-based input/output validation and 32 unit tests** covering evaluation logic, regression detection, retry behavior, and storage without requiring live API calls.

TrustLens — E-Commerce Review Analyzer, JavaScript, Chrome Extension API, NLP, HTML, CSS

- Developed a browser extension that analyzes customer reviews across e-commerce platforms including **Amazon, Flipkart, Myntra, Meesho, and AJIO** to provide product trust insights.
- Extracted visible review data using **Chrome Extension APIs and DOM manipulation** for real-time analysis directly on product pages.
- Implemented **rule-based NLP sentiment analysis** supporting English and Hinglish reviews to identify positive and negative review patterns.
- Analyzed review quality signals including **product-specific details, suspiciously short reviews, sentiment, and language patterns** to generate risk indicators.
- Designed an interactive browser panel displaying **risk scores, review statistics, positive signals, red flags, and per-review analysis**.
- Built a lightweight, user-facing review assessment system that summarizes large amounts of customer feedback into an actionable **trust verdict**.

Movie Recommendation System, Python, Pandas, NumPy, Scikit-learn, Streamlit

- Developed a **content-based movie recommendation system** that recommends the top 5 movies based on similarity to a user-selected movie.
- Processed movie metadata including **genres, keywords, cast, crew, and overview** to construct feature representations.
- Implemented **CountVectorizer and cosine similarity** to measure movie-to-movie similarity and rank recommendations.
- Built an interactive **Streamlit web application** allowing users to select movies and receive personalized recommendations.

Leadership & Activities

- Led and hosted a **36-hour national-level hackathon**, managing end-to-end coordination including logistics, scheduling, and participant support.
- Organized a **TEDx college event**, coordinating speakers, teams, and event execution to ensure smooth delivery.
- Actively contributed to organizing and managing a **technical paper conference**, handling event planning and coordination.

Education

Panimalar Engineering College, B.Tech - CSBS
CGPA: 8.50

10/2022 – 05/2026
Chennai, Tamilnadu

Velammal Vidyalaya, 12th - CBSE
Percentage: 82.4%

2019 – 2020
Paruthipattu, Chennai
